Ryan,

I checked around and as far as I know there are no plans to remove ballast tanks from the beach. There were plans in the works with owner but they fell through as Kathy may have shared. We have them on our list but since not a derelict vessel and not a hazard to commerce and navigation our funding sources are limited. If you could work into cleanup needs that would be our best bet.

Erika is taking a look at health assessment and will provide comment if needed. Thank you for forwarding to us. We had seen an earlier version but was unaware of current version out for comment.

Any further questions let us know.

Shayne

Shayne and Erika-
Couple of things....

- 1) Was wondering if you could provide me a status update related to the ballast tanks on the beach (mentioned below).
- 2) Not sure if you're aware, but the Department of Health released a draft of their public health assessment for the site in late February. As the manager of the tidelands, I hope they informed you of this and/or sent you a copy. If not, I'm including a link to the report below. The comment period runs through March 28.

Hi Shayne-

I fixed Erika's address in my contacts list, so hopefully everything I send to her in the future will get to her.

As far as an as-built goes...at some point in the relatively near future, we will be posting a copy of the final Removal Action Report on our website. It will contain, amongst other things, figures depicting where the work was completed (as-builts). When we post the report on our site, I will send you and Erika a message informing you that it has been posted, along with a link to get you to the report.

While we're on the topic of the site, I was wondering if there is anything to report from your end of things

regarding the ballast tanks on the beach. I seem to recall seeing a while back that DNR had initiated proceedings with Sesko to have them removed from the beach. Any update that can be reported?

Bill,

Thanks for update. Yes please do send future correspondence to Erika (FYI email you had for Erika was misspelled-proper spelling and email address above). Also please send us a copy of as-built for recent temporary cap near floats and confirmatory sampling results from recent remedial emergency action.

We look forward to working with you through the continued RI/FS process.

Thank you,
Shayne

Hi Shayne-

I'm out of the office today, but here's an update.

We are currently doing some internal planning/info gathering as we prepare to define the scope of the RI/FS work. This work is being done in preparation for a couple of meetings we intend to schedule for the spring; one with key stakeholders (which will include DNR), the other for the general public.

We haven't defined the content of the meetings yet, nor the dates. I'm hoping we will be able to hold the stakeholder meeting sometime in March, but that is yet to be seen.

The objectives of the stakeholder meeting will be to 1) provide folks with background information to help them determine how they can best participate in project-related activities, 2) identify what we believe are requirements that we will need to meet (ARARs) as we do our work in order to receive feedback from participants, 3) identify the general approaches that will be employed in our investigation work, again to elicit feedback, and 4) conduct a site visit. The plan is to coordinate with Erika Shaffer when we get to the point of scheduling a meeting.

We also plan to hold a meeting for the general public at some point after the stakeholder meeting. At this meeting, we intend to provide an update on where we are in the process, what we plan to be doing (particularly in the near term), and take any input on the scope of our investigation of the site.

As indicated above, our plan is to coordinate with Erika as our planning becomes more refined/defined. Let me know if should be in the loop as well.

Bill,

I am updating site status information for my sites and was wondering if you could provide me update regarding Bremerton Gasworks Site. I appreciate help.

Sincerely,
Shayne

Shayne,
I have turned the site over to Bill Ryan for the remedial work. He can help you.

Kathy,
Could you provide me an update on how remedial investigation work is progressing? I will be in office tomorrow if you have a chance to chat.
Thanks,
Shayne
